Technical Skills

Programming Languages: Python, Java
Model Development : Scikit-learn, Streamlit, Flask,Agentic AI, MCP
Data Processing/Viz : Matplotlib, Seaborn, Pandas, Streamlit
Database : MySQL, SQL
Tools & Platforms : Git, GitHub, Google Colab, PyCharm
Web Development : Django, Springboot

Work Experience

AI Intern - Merorr
Aug 2025 – Oct 2025

Skills - Agentic AI, Model Context Protocol, API calls, AI integration, OpenCV

- Developed MIRA, a multi-agent AI stylist system for Merorr, which recommends personalized clothing based on user attributes
- Engineered modular agent-based architecture, enabling scalable and adaptable decision-making across diverse user inputs.
- Built a virtual try-on feature enabling users to visualize themselves in selected outfits, using image processing and overlay techniques to boost engagement and user trust.

Software Engineer
[AUG 2026 - Present]

Capgemini *Tech Stack: Spring Boot, Angular, Hibernate/JPA, Spring Security*

- Completed intensive full-stack training in Spring Boot and Angular, covering layered architecture, JPA/Hibernate, REST APIs, and Spring Security.
- Built an **Insurance Management System** capstone as part of a 4-member team using Angular, implementing end-to-end CRUD workflows and role-based access.
- Developed a **Inventory Management System** application using layered REST architecture, JPQL, Mockito for unit testing, and Thymeleaf for server-side rendering.

Projects

Illustra: Interactive Data Visualisation platform
MAR 2025

Tech Stack: Python, Streamlit, Pandas, Matplotlib, Deepseek API *GitHub*

- Developed a data visualization platform that transformed raw CSV/Excel data into **10+ interactive charts** and graphs, enabling users to extract insights with zero coding knowledge.
- Integrated DeepSeek API, allowing users to auto-generate insights and train models, reducing manual analysis time by **30-50% on average**.
- Engineered the platform to support end-to-end data processing, modeling, and visualization for datasets up to **100,000+ rows**.

Hitched - Multi-Agent Wedding Planner
JUL 2026

Tech Stack: Python, Mistral AI Agents, Streamlit, GitHub Codespaces *GitHub*

- Built a multi-agent AI wedding planner using LangChain, enabling natural-language wedding planning through orchestrated specialist agents.
- Engineered autonomous agents for venue discovery, flight search, and theme-based playlist generation, integrating Tavily Search, Kiwi MCP, and YouTube Music API
- Implemented LLM tool calling, structured outputs (Pydantic), asynchronous agent execution, and modular orchestration for reliable multi-agent workflows.
- Strengthened application security with prompt injection detection, input sanitization, and guarded system prompts, deploying the solution via Streamlit.

Exploratory Data Analysis on NCRB data for crimes against SCs from 2011-2022
NOV 2025

Tech Stack: Python, Pandas, Matplotlib, Seaborn, Statsmodels *GitHub*

- Conducted in-depth Exploratory Data Analysis (EDA) on **12 years (2011–2022)** of NCRB data, analyzing historical crime trends against Scheduled Castes (SC) using Python and Pandas.
- Developed a visualization pipeline with **Matplotlib** and **Seaborn** to showcase state-wise disparities and year-on-year crime pattern shifts.
- Applied **OLS Regression** and statistical methods to quantify the relationship between crime incidents and demographic variables, enabling data-backed insights.

Education

Galgotias College Of Engineering & Technology
2022 – 2026

Bachelor of Technology - CSE (AIML) *7.53 CGPA*

Takshila Academy
AUG 2020 – AUG 2021

12th Graduate (CBSE Board) - Physics, Chemistry, Maths *91.84%*

Takshila Academy
2018 – 2019

10th Graduate (CBSE Board) *93%*
